

# Have You Calibrated Your Energy or Flow Meters This Heating Season?

Get Started With Our Measurement Solutions Team

## We Can Help You:

- Confirm that the information you are getting from your meters is correct, especially in low flow situations
- Get ahead of any possible failures
- Bill your tenants correctly, the first time

With Calibration Services from Control Associates, we'll send our technicians to your site to verify that your existing equipment is working properly and matches specifications. Then, we'll provide a full report of our findings and make recommendations or install newer equipment, as needed.

## CUSTOMER STORY

### On-Site Measurement Services

This multi-story tech center housed contemporary luxury offices and popular restaurants. Their existing paddle wheel type meters, which measured the energy usage for each tenant, had high failure rates. Low flow measurement was also a major problem because the existing meters were not picking up the tenants' usage. In addition, one of the brands could not be calibrated and the other did not offer on-site service.

Control Associates' Measurement Solutions experts calibrated all the energy meters on-site utilizing a Flexim FLUXUS® F601 Portable Multi-Functional Flow Meter as the reference. The FLUXUS has become the industry standard for temporary heating and cooling thermal energy measurements for all types of BTU meters, with Resistance Temperature Detectors (RTDs) matched to .03° F.

As your exclusive representative for Flexim services in the NY Metro Area, we are focused on delivering comprehensive support for all of your flow meters. We offer:

- **Installation, Start-up & Commissioning**
- **On-Site Measurement Services**
- **Certification of Existing Meters**
- **Third-Party Verification**

## BENEFITS

• Convenient On-Site Calibration of Any Meter

• Ability to Measure Low Flow Rates

• Accurate Tenant Billing
